

Company overview

Respira International is an impact-driven carbon finance business. Our high-quality verified emissions reductions allow corporations and financial institutions to mitigate their environmental impact.

Respira channels private capital into climate solutions, ensuring long-term relationships with trusted carbon project developers that enable our clients to use predominantly nature-based solutions to build sustainable, climate positive businesses.

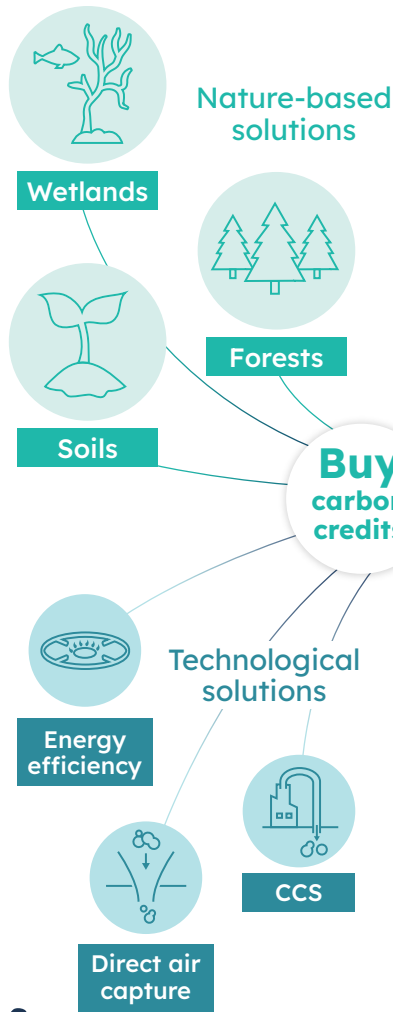

Why Respira?

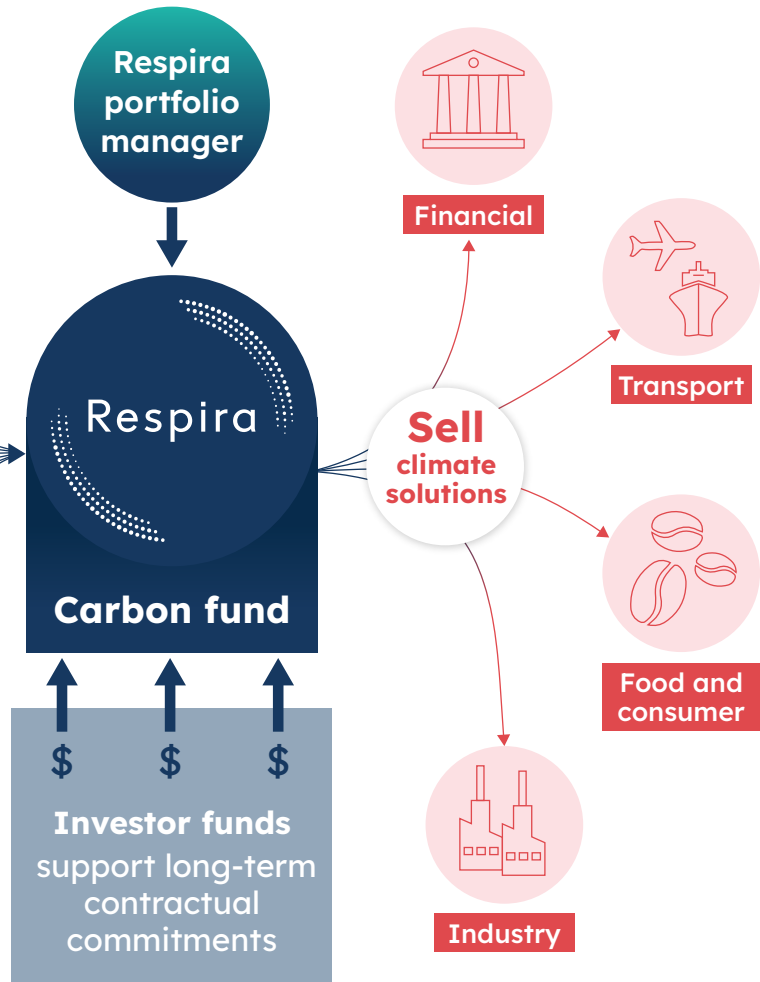

- **Assurance:** Respira sources projects directly and conducts its own due diligence ensuring quality, integrity and local impact. All projects are certified to the highest standards and align with Respira's values.
- **Long-term relationships:** Respira uses its balance sheet to support project developers through long-term offtake agreements. This provides projects with the resources they need to expand and buyers the ability to lock-in future prices and build business resilience.
- **Experience:** Respira's team combines a 30+ year track record in global financial markets with a deep understanding of carbon project development in leading international conservation organisations.
- **Product innovation:** Respira's suite of products extends from bespoke portfolios of carbon credits to carbon hedging and insurance solutions – allowing clients to manage and hedge both reputational and carbon price risk.
- **Nature-based solutions (NBS):** The conservation, restoration and improved management of land and water can provide up to one third of the necessary carbon mitigation for global climate targets.¹ NBS make up the vast majority of Respira's portfolio.

Carbon projects

Corporates

Carbon markets

We are at a major tipping point for carbon markets, which are now entering a sustained upward trend.

The voluntary carbon market is an effective means to reduce net carbon emissions by driving finance to projects that deliver independently verified emissions reductions. It also enables companies to achieve ambitious climate goals by complementing their internal decarbonisation strategies with the purchase of carbon credits, used to offset their currently unavoidable emissions.

Added value

Demand for verified carbon credits is increasing fast as corporations commit to net-zero targets². There is also a continued push for companies to address nature loss³ and sustainable development within their value chains.

NBS help to mitigate climate change as well as bringing about positive and measurable economic, social, and environmental benefits to local areas and people. Buyers of these types of carbon credits are able to advance climate, nature⁴ and sustainability targets, through tracking positive impacts to the SDGs.
